## General Questions

### **What does ACT stand for?**

ACT stands for "All Cocoa Touch". This is the name of the frameworks which Apple provides for developers on the iPhone.

The ACT prefix serves to distinguish our Mac applications from our iPhone applications. Indeed, our Mac applications share the Houdah prefix. E.g. HoudahSpot & HoudahGeo

---

### **Where can I purchase iPhone applications?**

Houdah Software's iPhone applications are available exclusively in Apple's AppStore on iPhone, iPod Touch or iTunes 7.7 or later.

---

ACTPrinter

### **What are the requirements?**

You need a Mac running Mac OS X Tiger or Leopard. Your Mac needs to have an Airport/WiFi card.

---

### **Can I print any document?**

You may "print" from any application which uses the standard "Print" dialog. Here you will find the "Print to iPhone" command in the PDF menu located in the lower left of the "Print" window.

---

### **Why can't I print from Adobe Acrobat?**

Adobe Acrobat does not permit the use of PDF Services.

The workaround is to drag the icon of the PDF file directly onto the ACTPrinter Mac icon.

---

### **How can I delete printouts on my iPhone?**

In the list view, just swipe your finger like you would do in "Mail"

---

ACTSudoku UNLIMITED

### **How many game boards are included?**

ACTSudoku constantly generates fresh game boards. There is no limit. You will never run out of fresh games.

---

### **How hard are the games?**

ACTSudoku gives you a choice of 3 difficulty levels. Easy games typically take 5 minutes to solve – with automatic markers enabled. Hard games often take 40 minutes and up!

---

### **What if I get a phone call?**

Your game will be suspended. You may come back later to resume the game.

---

### **Can I record best times?**

Recording best times would not make much sense. As game boards are generated, no two players will get to play the same game. Thus there will be no common ground for comparing times.

---

### **It's too easy! ACTSudoku gives out the solution**

If you find the Sudoku puzzle to be too easy to solve using automatic markers, you may chose disable them.

You may also try yourself at a harder game. A "hard" game takes about 40 minutes to solve – with automatic markers enabled!

---

### **Can I disable automatic markers?**

Sure. You may disable automatic markers ahead of time within ACTSudoku's settings menu. You will always keep the option to enable them during gameplay.

If the game was started with automatic markers enabled, you may disable automatic markers during gameplay. Existing markers will not be removed. They will however no longer be updated automatically.

---

**Does it need an Internet connection?**

No.

---

ACTSudoku EASY

**What is the difference between the FREE and the regular version?**

ACTSudoku EASY allows only for "Easy" games whereas the regular version provides 3 levels of difficulty.

Both versions may generate a virtually unlimited number of game board.

Both versions provide you with intelligent hints to help you improve your Sudoku skills.

---

ACTCurrency

**Where is the "=" key?**

You won't need and "=" or "enter" key. ACTCurrency computes the converted value as you type.

---

**Which currencies are supported?**

ACTCurrency is a universal currency converter. You may configure it for any number of currencies.

Moreover ACTCurrency has the ability to automatically update exchange rates between 150 world currencies.

---

**How can I look up exchange rates?**

ACTCurrency automatically updates exchanges rates between 150 world currencies.

If either your home currency, or your target currency are not part of the above list, you will need to manually enter the appropriate exchange rate.

Imagine your home currency is the USD. Now, you want to add the Honduran Lempir to the list of currencies. For this you would head to [www.google.com](http://www.google.com) and enter the following: "[1 USD in HNL](#)". It will reply with the value you need to enter in ACTCurrency. E.g. "1 U.S. dollar = 18.8971616 Honduran lempiras"

---

### **Does it need an Internet connection?**

The Internet connection is needed to update exchange rates. When there is no connection, ACTCurrency will rely on the latest downloaded exchange rates.

---

ACTGratuity

### **Where is the "=" key?**

You won't need an "=" or "enter" key. ACTCurrency computes tips as you type.

---

### **What is good service?**

Service quality and thus tip level are left to your good judgement.

---

### **What is an appropriate tip?**

In the USA, waiters are usually tipped 15%. You may tip lower for less than expected service. Don't forget to reward exceptional service with a bigger tip.

---

### **Is the tip percentage configurable?**

ACTGratuity 1.6 lets you configure the tip range using the iPhone "Settings" application. The default range is 12.5% to 20%. Please reward good service with an appropriate tip.

---

### **Does it need an Internet connection?**

No.

---
